

Using New Memory Card in Car DVR

If you want to put a new memory card to the Car DVR, you need to make sure your new card is on the compatible card list from the user manual.

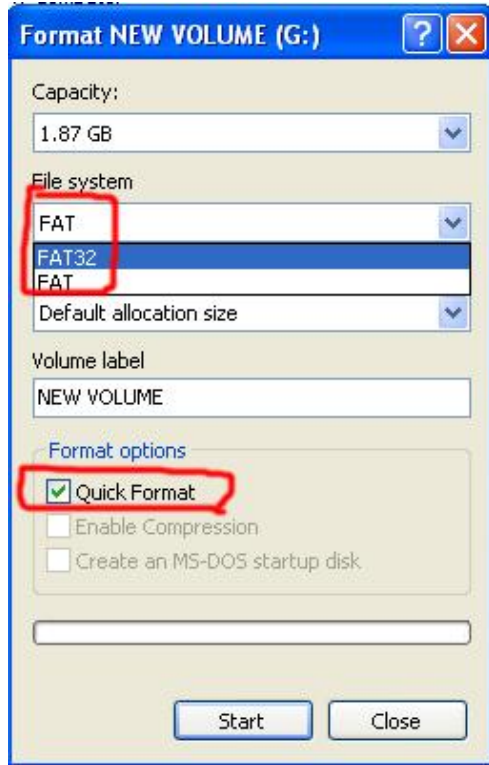

Before using the new memory card in the Car DVR, you need to format it on the computer, two steps:

Step one: In "My Computer", right click on your new memory card, choose "Format"

Step two:

Make sure the file system is “FAT” or FAT32”, otherwise the Car DVR won’t recognize the new memory card, and select “Quick Format”, then you can start formatting your new memory card. After you finished those two steps, you are good to use this new memory card in your Car DVR.

When you put the formatted new memory into the Car DVR, the Car DVR will initialize and create some folders and files in the memory card, but the player won’t be created in the new memory card, you can get the player from your old memory card or download from our website, here is the link:
